

GOLF GREEN COVERS

THE ULTIMATE WINTER PROTECTION SOLUTION

"Since 1987"

Coverttech's proven 3-step solution for golf greens is designed to limit winter damage and, most importantly, allow for an **Earlier Opening** of the golf course. Coverttech Solution represents a comprehensive insurance policy for golf courses, protecting their most valuable asset.

STEP ONE - SUPREME-GREEN COVER

Polyethylene woven fabric, UV treated and non-coated material. The product allows for penetration of sunlight, air, and water. The Supreme Green Cover allows for unimpeded germination and growth of the grass. The Supreme Green Cover has been proven to increase soil temperature, mitigate against the damage caused by ice, prevent stone mold formation, accelerate germination, and reduce seed loss. It is an excellent choice for use in both snowbelt and temperate climates alike. This lightweight, one piece cover is designed to be easily installed, **ensuring that your golf turf is ready for play weeks earlier**. The Supreme Green cover can be easily removed and utilized as a temporary protective measure throughout the winter. In colder weather, the golf course maintenance team can apply additional protection on top of the Supreme Green cover throughout the dormant period of the green.

STEP TWO - INSULATION BUBBLE PROTECTION

The Bubble layer provides insulation properties by layering Bubble material between the Supreme Green and the Solid Green Shield. Bubble Insulation is supplied in roll lengths of 100 feet by 12 feet width. The Bubble Insulation provides protection in the event of sudden temperature changes. While other forms of insulation, such as hay or foam, may be suitable in certain circumstances, we do not recommend these options due to their limited reusability. Upon request, Coverttech could provide custom sizes to meet the golf superintendent's specifications.

STEP THREE - SOLID GREEN SHIELD TARP

Once the Supreme Green Cover and the Bubble Insulation Protection have been installed, we recommend that you cover the green with our Solid Green Shield Tarp to complete the installation process. This woven, double-sided coated polyethylene material provides protection for the turf from ice and frost damage and wind erosion.

We are happy to provide a variety of alternative solutions, including our low-profile bubble insulation that is sewn into the Green Shield material.

Should you require any further information or assistance, please contact our customer service team either by phone or email.
